

WHOLE CAPTURE™ PRIMER

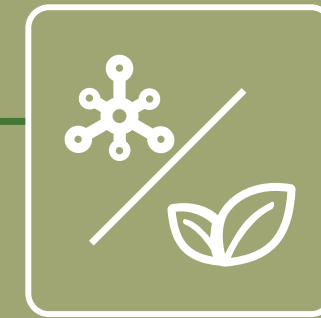

INTRODUCING CELLULAR DELIVERY FOR NATURAL BIOACTIVES

THE PROBLEM WITH TRADITIONAL SUPPLEMENTS

✗ Drying/Freezing Destroys Bioactives:

Bioactives are fragile. Heat, freezing, oxygen, and long processing degrade potency.

✗ Single Ingredient vs Entourage:

Many supplements isolate one compound, stripping away other synergistic natural bioactives. That means a less complete, less balanced effect.

✗ Low Uptake Through the GI Tract

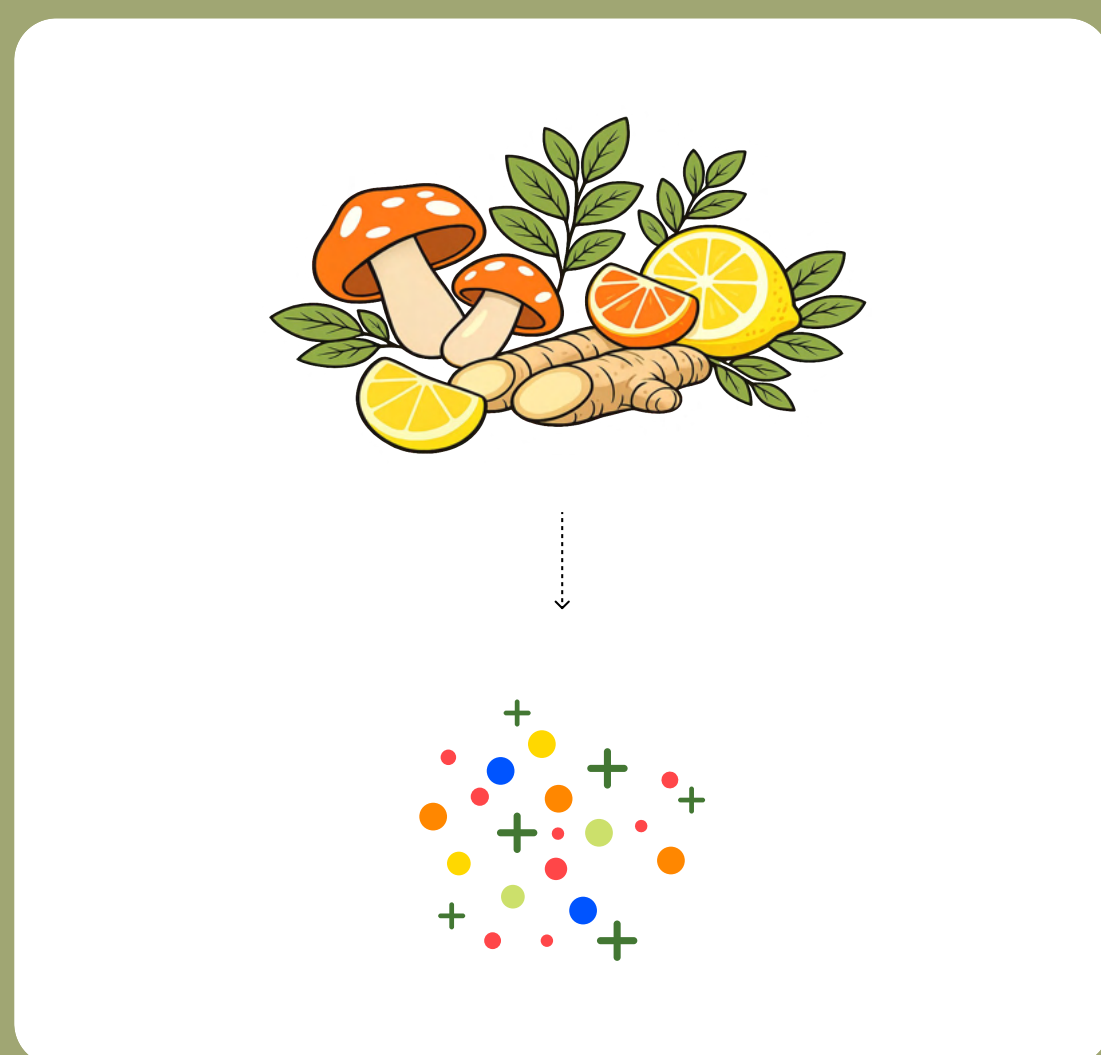

Oral doses face digestion and first-pass metabolism. A meaningful portion never reaches circulation.

OUR "WHOLE EXTRACTION" PROCESS

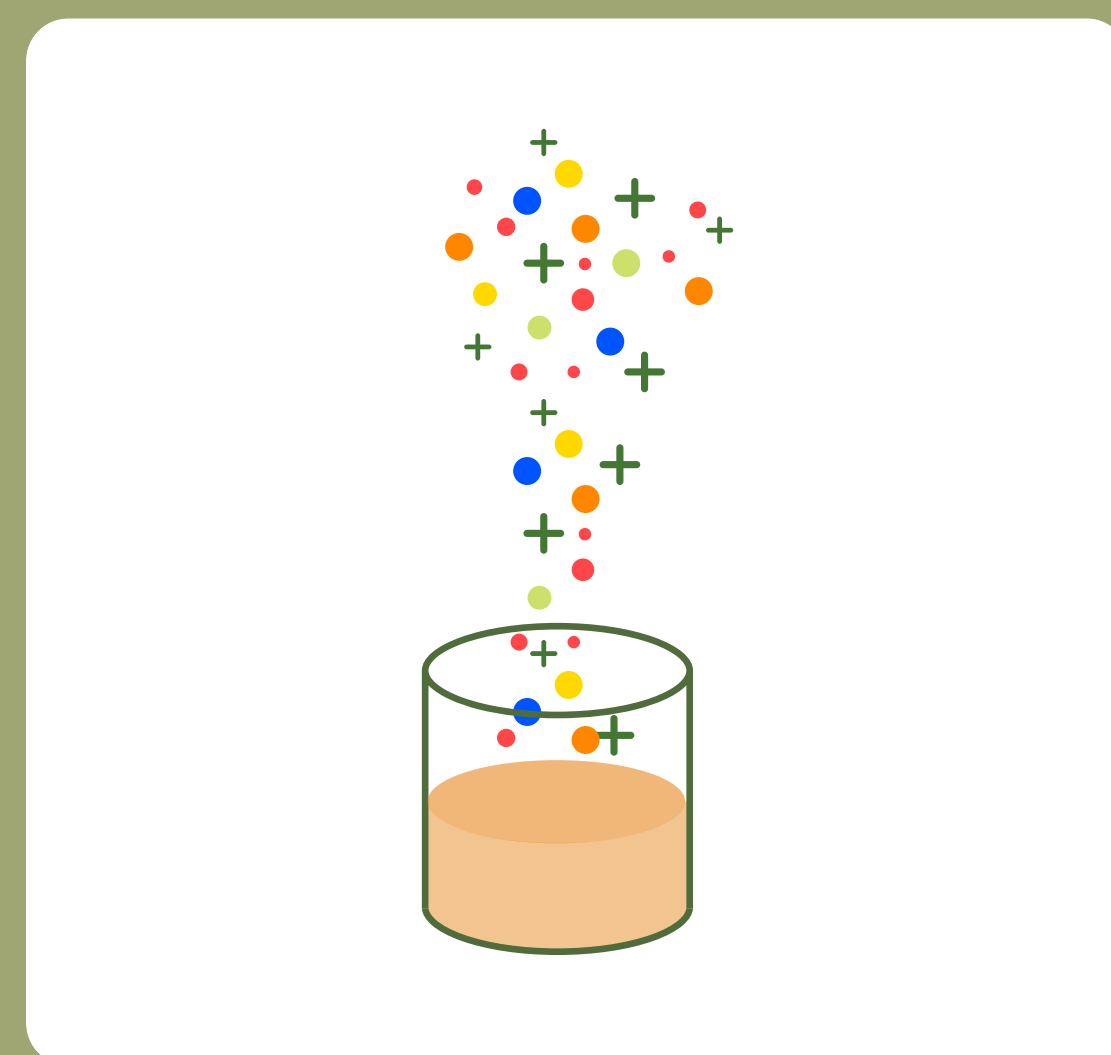

01 - Whole Extract

Capture ALL active ingredients (full spectrum) from the source material.

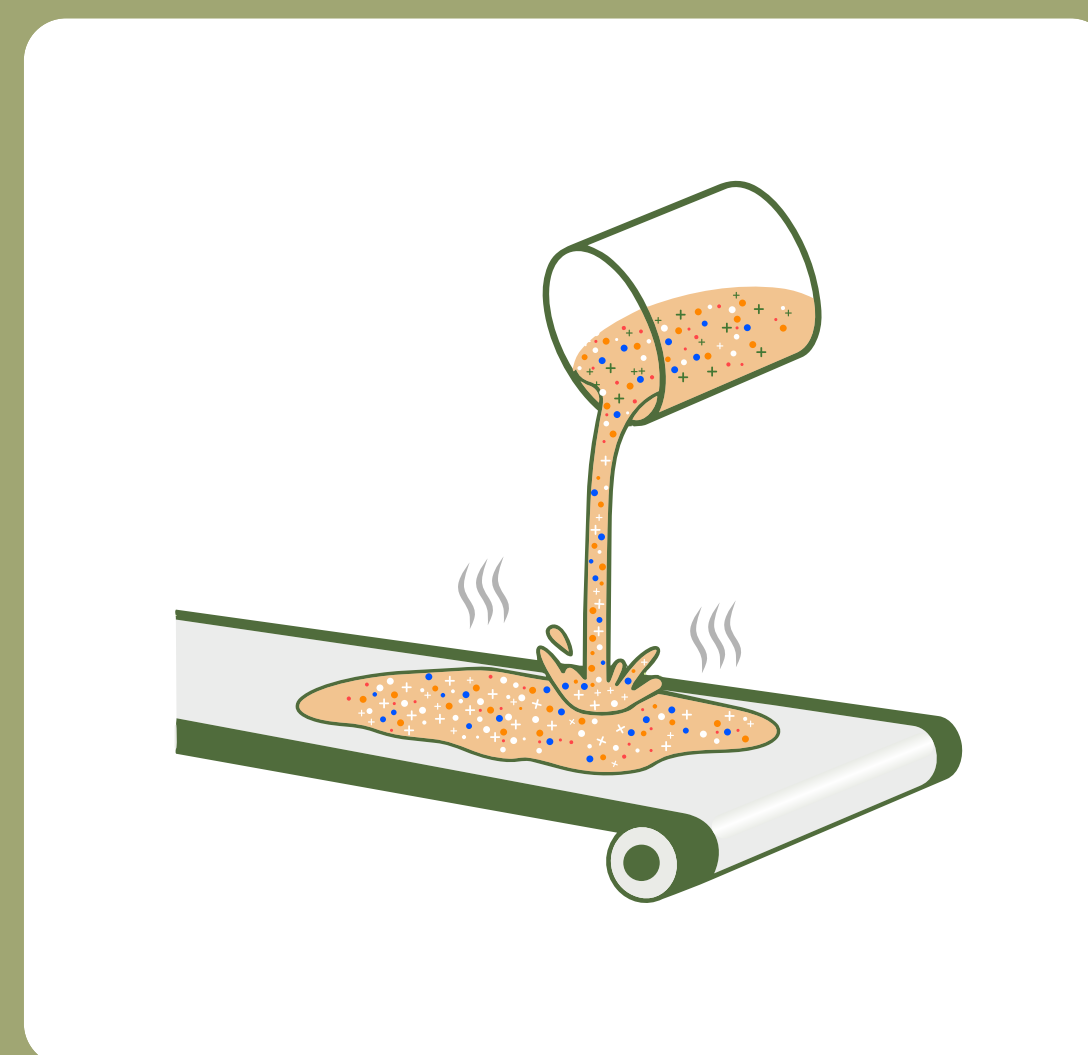

02 - Capture

We mix into an emulsion and combine with a natural binder to form a bioactive cocktail.

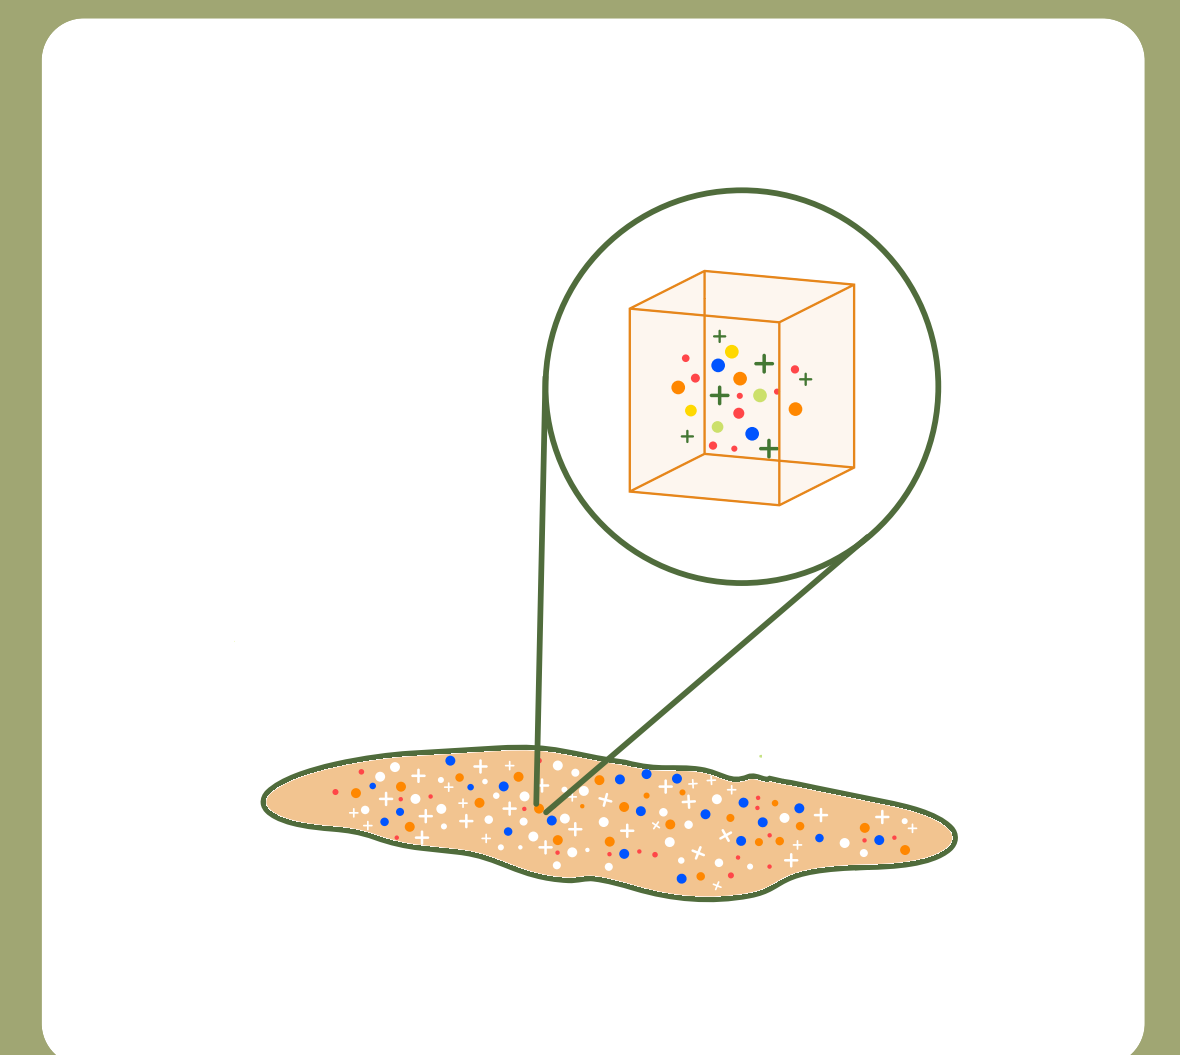

03 - Dry

Run low-stress drying step

04 - Stabilize

Finish as a shelf-stable flake where bioactives are suspended in a natural protective matrix.

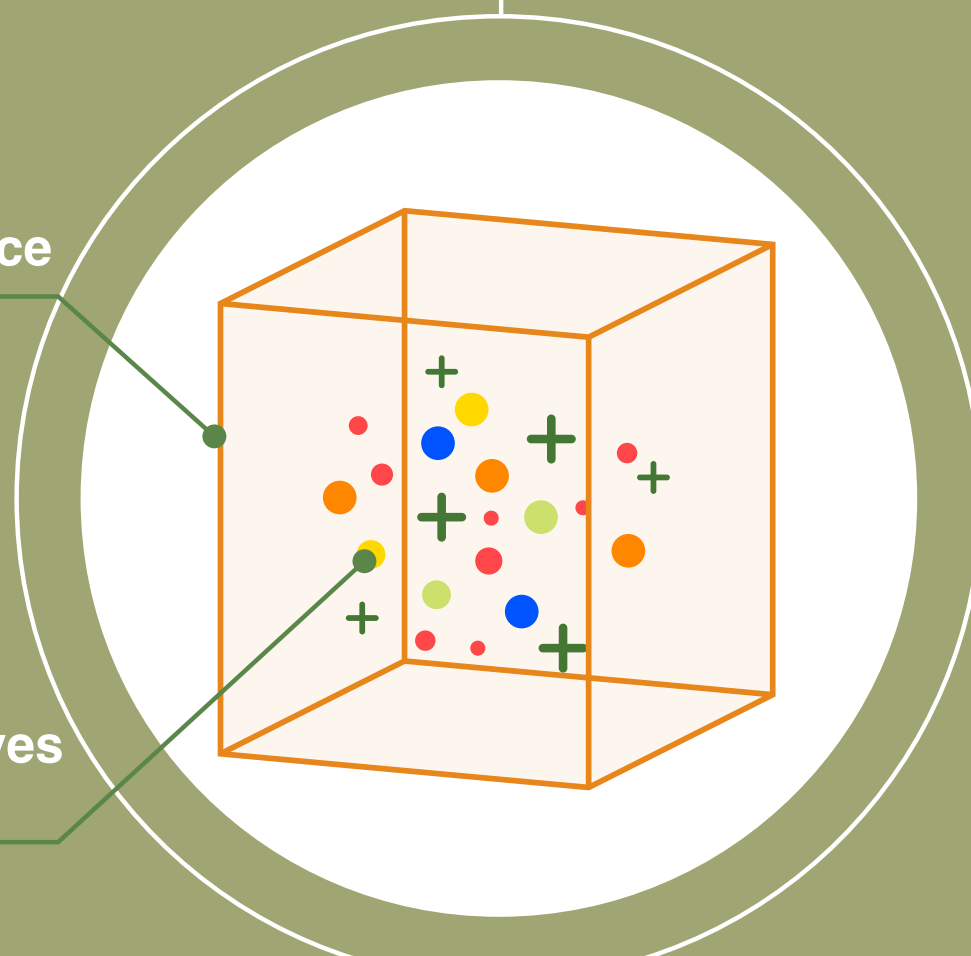

THE BENEFITS OF WHOLE CAPTURE™ FLAKES

1000x

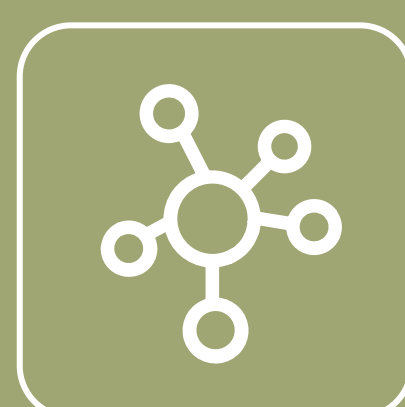

Natural Protective Lattice

Fragile Bioactives Suspended

✓ 3 Year Shelf Life

Stabilized into a dry matrix that protects fragile bioactives over time.

✓ Entourage Effect

Keeps the full spectrum together, so bioactives work in concert, not isolation.

✓ Maximum Bioavailability

Starts absorbing through mouth and throat mucosa before harsh digestion.
